TOUCH UP IN 3 STEPS

PROFESSIONAL REPAIR · AT HOME

COLOR MATCH GUARANTEED

B BEFORE

1 APPLY PAINT

2 CORRECT N CLEAR

3 FINISH

WELCOME

Thank you for choosing the Color N Drive touch-up kit. With a few simple steps, anyone can get a professional-looking repair at home. This isn't ordinary dealership paint — it's a custom-matched blend made for quick drying, easy excess removal and a perfect factory match.

APPLICATION — 3 STEPS

Before you start. Clean the damaged area with Correct'N'Clear and let it dry completely.

- 1 Apply paint.** Fill the chip or scratch with the micro-brush. Add enough paint to completely fill the damage.
- 2 Correct'N'Clear.** Wrap the Polytex cloth around your finger, add a little Correct'N'Clear, and wipe across the repair to lift the excess. Removed too much? Add more paint. Too much left? Wipe again. Repeat until it looks right. *Optional — for deeper chips, glide the included Leveling Card over the wet paint to flatten the repair before wiping.*
- 3 Finish.** Let the repair dry. If you like, use the included polishing paste and wax to bring back the gloss.

Remember: mistakes are easy to fix — just wipe fresh paint off with Correct'N'Clear and try again. **Fill. Wipe. Repeat. Until it looks right.**

GOOD TO KNOW

This is an all-in-one kit, and you can't really go wrong. The paste and wax are free extras — use them if you like, skip them if you don't, and you don't have to follow our exact order. Correct'N'Clear is your multi-purpose helper: it cleans the surface before you start, and it's your undo button — if you're not happy, wipe the paint off and start again.

TWO BOTTLES IN YOUR KIT?

Check the labels first:

Two identical bottles → Pro kit. Same paint in both — use one, keep the other as a spare. No extra steps.

Marked #1 and #2 → two-coat colour. #1 is the solid colour, #2 the pearl. Deep chips: apply #1, dry ~10 min, then #2. Light damage where the colour shows: #2 alone may be enough.

TIPS

- **Paint too thick?** Shake well first; if that's not enough, stir it with the brush from your kit. Still thick? Mix in a little cellulose (lacquer) thinner — about 1/5 to 1/3 of the paint — a few drops at a time while stirring, until all the dried paint dissolves and the consistency is smooth and even. It's inexpensive and sold at most local hardware or paint shops.
- For deep chips, repeat the application a few times for a full fill.
- Don't pressure-wash the car for at least a week after application.

⚠ Lacquer thinner is flammable — use it in a well-ventilated area.

IF SOMETHING'S NOT RIGHT

- **Bottle broken or leaked in transit?** Don't return it — email us a photo and we'll send a free replacement right away. (Minor leaks from pressure are harmless; the product still works.)
- **Not happy with the result?** No problem — Correct'N'Clear wipes the paint off so you can start over.
- Any question at all, just contact us — we're glad to help.
